Safelock

Housing colour

The aluminum housing is powder-coated as standard in the colors anthracite gray similar to RAL 7016 and gray aluminum similar to RAL 9007 and thus adapts perfectly to traditional as well as modern door constructions.

For Tousek control units

The SAFELOCK is perfectly matched to Tousek gate control units. It is also possible to operate two motor bolts in parallel. Of course, simple retrofitting to existing TOUSEK and third-party gate systems is possible.

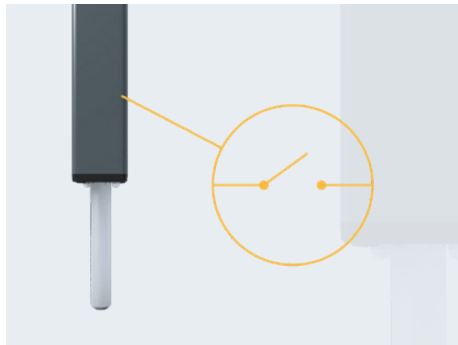

Comfortable emergency release

The emergency release - important in the event of a power failure - is blocked with a commercially available profile half cylinder. It is interchangeable and can therefore be easily integrated into an existing locking system. Every SAFELOCK is supplied with a cylinder and three keys as standard.

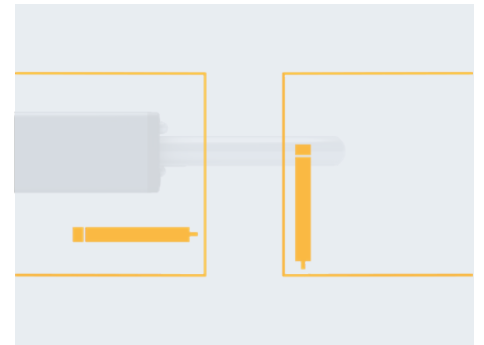

Easy retrofitting

The robust construction reliably prevents uninvited guests from entering and protects the entire gate system in the event of increased wind pressure. External control units or existing TOUSEK controls can also be retrofitted with the motor bolt via the flashing light output.

Integrated limit switches

The SAFELOCK motor drop bolt is equipped with an integrated position switch for "retracting". In conjunction with a TOUSEK control system, this prevents the gate from starting prematurely. Safe even in dangerous situations: the integrated obstacle detection of the SAFELOCK.

Mounting options

The variety of gate systems often requires a wide variety of installation situations for the motor drop bolt. The SAFELOCK drop bolt can be installed vertically downwards as well as horizontally. The EXTRA large locking bolt and the long stroke make it possible to bridge larger ground clearances.

Power supply	230V AC
Power consumption	3A
Lifting height, diameter	125mm, Ø = 23mm
Lifting capacity	200N
compatibility	ST 51, ST 61, ST 63, ST 64, ST REX

47 YEARS

For more than 45 years, we have been developing high-quality gate drives and accessories. Our success proves us right: thanks to the professional trained staff, a wide and innovative product range and an extensive service we now belong to the international top class. We constantly try to improve our technical advantages through the development of new products. We obviously pay attention to the strict observance of rigorous production standards: the narrowest production tolerances and their constant monitoring are a matter of course for us.
